ein catabolic process
ntiation by RNA polymerase II
protein−DNA complex assembly
cellular response to nitrogen starvation
protein modification by small protein conjugation or removal
intrinsic apoptotic signaling pathway
positive regulation of telomere maintenance in response to DNA damage
autophagosome maturation
intracellular receptor signaling pathway
cellular response to peptide hormone stimulus
hormone−mediated signaling pathway
regulation of cellular response to stress
positive regulation of DNA−binding transcription factor activity
positive regulation of protein localization to Cajal body
double−strand break repair via break−induced replication
response to ionizing radiation
Fc−gamma receptor signaling pathway
regulation of leukocyte activation
positive regulation of T cell activation
positive regulation of phosphate metabolic process
positive regulation of phosphorylation
cell surface receptor protein serine/threonine kinase signaling pathway
positive regulation of fibroblast proliferation
regulation of cell growth
skeletal system development
regulation of embryonic development
protein K11−linked ubiquitination
metaphase/anaphase transition of mitotic cell cycle
regulation of meiotic cell cycle
mononuclear cell differentiation
connective tissue development
regulation of striated muscle cell differentiation
rhythmic process
thymus development
regulation of reactive oxygen species metabolic process
transforming growth factor beta production
cellular response to lectin
positive regulation of cell migration
ameboidal−type cell migration
viral process
establishment or maintenance of epithelial cell apical/basal polarity
synaptic transmission, glutamatergic
regulation of glucose metabolic process
regulation of cytosolic calcium ion concentration
regulation of nitric oxide biosynthetic process
regulation of mitotic spindle assembly
viral budding from plasma membrane
positive regulation of lamellipodium organization
actin polymerization or depolymerization
