SN65 GO semantic similarity network
miRNA metabolic process
myeloid cell differentiation
regulation of miRNA metabolic process
regulation of fibroblast proliferation
fibroblast proliferation
regulation of reactive oxygen species metabolic process
regulation of transcription initiation by RNA polymerase II
protein−DNA complex organization
reactive oxygen species metabolic process
protein−DNA complex assembly
morphogenesis of an epithelial fold
regulation of protein stability
autophagosome maturation
cell growth
regulation of carbohydrate catabolic process
mitophagy
autophagosome assembly
negative regulation of catabolic process
in utero embryonic development
response to radiation
cellular response to UV
erythrocyte homeostasis
digestive tract morphogenesis
cellular response to organic cyclic compound
epigenetic regulation of gene expression
response to steroid hormone
heart development
maintenance of cell number
cellular response to lipid
response to transforming growth factor beta
hormone−mediated signaling pathway
response to estrogen
vitamin D receptor signaling pathway
somatic stem cell population maintenance
response to nutrient levels
transforming growth factor beta receptor signaling pathway
cellular response to nutrient levels
regulation of response to nutrient levels
regulation of cell cycle G2/M phase transition
intracellular receptor signaling pathway
neglog10_padj

representative_term
autophagosome maturation
cellular response to nitrogen starvation
cellular response to peptide hormone stimulus
connective tissue development
hormone−mediated signaling pathway
intracellular receptor signaling pathway
metaphase/anaphase transition of mitotic cell cycle
mononuclear cell differentiation
positive regulation of fibroblast proliferation
positive regulation of telomere maintenance in response to DNA damage
proteasome−mediated ubiquitin−dependent protein catabolic process
protein−DNA complex assembly
regulation of cell growth
regulation of cytosolic calcium ion concentration
regulation of embryonic development
regulation of glucose metabolic process
regulation of protein stability
regulation of reactive oxygen species metabolic process
regulation of transcription initiation by RNA polymerase II
response to ionizing radiation
skeletal system development
somatic stem cell population maintenance
